

Asset Management Business Assessor

Know your position, maximise value

November 2018

With the KPMG Asset Management Business Assessor, have a clear understanding of your asset management system performance, get in control, and plan ahead.

Valuable assets, clear visibility

Organisations are under continual pressure to improve the management of their physical assets and infrastructure portfolios. Assets must drive value for stakeholders, while the organisation balances cost, risk, performance and regulatory requirements. KPMG's Asset Management Business Assessor helps organisations understand the effectiveness of their asset management system. It provides a clear understanding of current performance against targets and benchmarks, a focus on strategic priorities, supports informed decisions, and helps maximise the value of your assets.

How it works

KPMG's cloud-based solution allows our clients to rapidly understand their asset management performance. Whether used in self-assessment or through engaging a KPMG team, our tool delivers a trusted, transparent, efficient and repeatable outcome.

Key features include:

- ✔ **An online maturity assessment** of asset management functions against multiple standards (including ISO55000, GFMAM, AMAF, AMVC, NAMAf).
- ✔ **Automated reporting** provides a repeatable process, with traceability of evidence, allowing you to track your progress and streamline reporting to stakeholders and regulators.
- ✔ **Broad engagement** using our built in assessment allocation and collation feature means you can access the right subject matter experts for the right areas, anywhere they are online.
- ✔ **Live online visibility** for both the organisation and aligned KPMG advisors.

The tool identifies gaps against relevant standards and best practice models. Using the response data, it enters deficiencies into a template action plan and imports editable recommendations from respondents. KPMG's Asset Management Assessment Assessor provides efficient and trusted results enabling our clients to focus on improvement and building sustainable asset management practices.
