

# PROTECT. TRANSFORM.

KPMG Powered Enterprise | Cyber | Identity

## To disrupt, you must transform

CEOs are no longer looking at cyber risk as a separate topic. More and more they have it embedded into their overall change programs and are beginning to make strategic decisions with cyber risk in mind. It is no longer viewed as a standalone solution.

72 percent of CEOs agree this year that “strong cyber security is critical to engender trust with our key stakeholders,” compared to 55 percent in 2018.<sup>1</sup>

## KPMG Powered Enterprise accelerates cyber identity and access management transformation.

At the heart of KPMG Powered Enterprise | Cyber, KPMG’s platform for Identity Access Management (IAM) transformation, is a pre-built target operating model complementing a whole of Identity pre-configured enterprise IAM platform.

Powered Cyber | Identity is an outcome-driven functional transformation solution for the modern CISO organisation that prepares and protects your business for the digital future.

KPMG professionals understand the challenges with increased data complexity, lack of process standardisation and ineffective governance deployed for identity and access management programs. For the first time, KPMG has brought together our Powered Identity solution into a single stack covering Identity Governance and Identity and Access Management. We can help organisations better respond to risk reduction requirements and auditor expectations.

Through accelerated delivery of IAM controls and capabilities, Powered Cyber | Identity can enable business outcomes and demonstrate rapid reduction of cyber security risks for your organisation.

## CISOs have important questions

- Is it safe to move my identity and access management (IAM) capabilities to the cloud?
- Can I align my application security strategy with industry standards?
- Does my access management solution meet the needs of my business?
- Is my organisation tracking pertinent security and risk indicators?
- How do I ensure my cyber access management solution is meeting my modern security needs?

- Identity Governance and Administration
- Identity & Access Management (including biometric step-up)
- Consumer Data Right accelerators

It’s not what you put in the cloud that matters, but what you get out of it.

### Powered Enterprise | Cyber provides:

- Adoption through standardisation
- Replaces tactical processes
- Formalises the process taxonomy and governance model for IAM services
- Solution focused instead of being cost or software package focused
- Diagnostics to drive better predictability of ROI
- Standards-based integration allowing rapid adoption of services

## Going beyond efficiency gains

Powered Cyber combines a whole of stack IAM solutions with KPMG's Powered Enterprise methodology to accelerate the delivery of cloud access management programs and services. It is an outcome-driven transformation solution that enables you to prioritise and deliver IAM capabilities in a way that secures your most critical assets. We've included a cutting-edge biometric authentication module, allowing you to move to a passwordless ecosystem to reduce the risk of ransomware within your enterprise identity.

## What's in the box?

Powered Cyber provides a combination of leading practices and processes, proven technology solutions and a next-generation delivery framework.

- The **Target Operating Model** shapes how transformation plays through every layer of the organisation.
- The **Powered Execution Suite** is an integrated platform of next generation tools to help deliver functional transformation.
- The **Powered Evolution** provides access to specialised resources to drive continuing evolution.

## The Target Operating Model

## Imagine your identity management function with...

**Faster, measurable and scalable outcomes resulting in a better user experience.**

**Quantifiable reduction in cyber security risks.**

**Auditable and sustainable outcomes to regulators.**
