

# Scenario Analysis

Expand your scenario and what-if analysis capabilities during a crisis

During times of crises, it is important to understand the short and long-term impact on your business

## We understand what you are facing

During a crisis, planning teams will see a significant increase in the scenarios they run and the amount of what-if analyses they perform.

To deal with the broader economic impact of this crisis, planning teams will face a surge in workload to determine the short-term impact of deteriorating economic conditions as well as the long-term impact on the business based on decisions made today.

They will be expected to provide on-demand analytics and insights to ensure liquidity, while frequently refreshing a rolling forecast due to the uncertainty and duration of the current climate.

On top of this, they will be doing so while also coping with the challenges of increased remote working, potentially unfamiliar virtual team dynamics, social distancing and family responsibilities. You may feel you are in uncharted territory, but these challenging times can be navigated successfully.

## The help you need, the way you need it

KPMG can provide financial modeling solutions within days to organizations who need expanded scenario modeling capabilities, management reporting, financial and cash forecasting, as well as data and analytics capabilities to support informed business decisions.

Our team includes a diverse group of performance management professionals that provide business-focused, technology-enabled skillsets to help you quickly achieve insights for your business.
