

Security Architecture Design & Implementation

KPMG Cybersecurity

KPMG China

kpmg.com/cn

KPMG sees more and more organizations are concerned about their security work because the work is passive and fragmented, often impacted by security incident and lack of resource. Without a proper enterprise-level security structure, organization might not have a full picture and a clear oversight on security work, especially from below perspective:

Threat Landscape –

Security threat landscape is constantly changing, which drives security architecture to be updated and improved to address and respond to the new threats.

Evolving Technologies -

The emerging technologies, for example, cloud computing, mobile application, IoT etc. drive architects to always look into improving corporate security posture due to ever-changing technologies and capabilities.

Business Requirements -

Business changes including digital transformation and mergers & acquisitions motivate security architecture in meeting business technical security needs and standardizing security solutions in a timely manner.

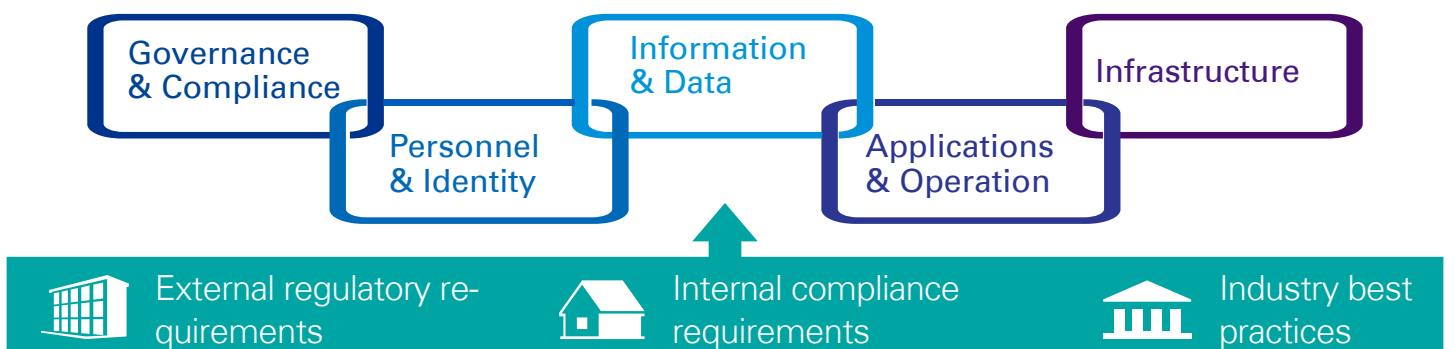

Compliance requirements -

Legal and regulatory requirements request structured security architecture to address the security needs based on the applicable external requirements.

KPMG helps organizations to establish enterprise-level security architecture, and effectively address the above concerns raised by cyber threat, evolving technology, business and regulation.

KPMG Security Architecture Framework

KPMG Security Architecture Framework is composed of five key areas including Governance & Compliance, Personnel & Identity, Information & Data, Applications & Operations, and Infrastructure. It could be further customized and enhanced to meet organizational needs, internal requirements and external regulations.

Benefits from Security Architecture Planning

Experiences

Wide ranging experience and well established record in the design and implementation of security architecture programs across various industries

Industrial Practice

We have accumulated rich knowledge in different industries, and we will bring our best insight to you

Skills & Capabilities

Cross-function teams with specialized skillsets in security solutions and enterprise architecture

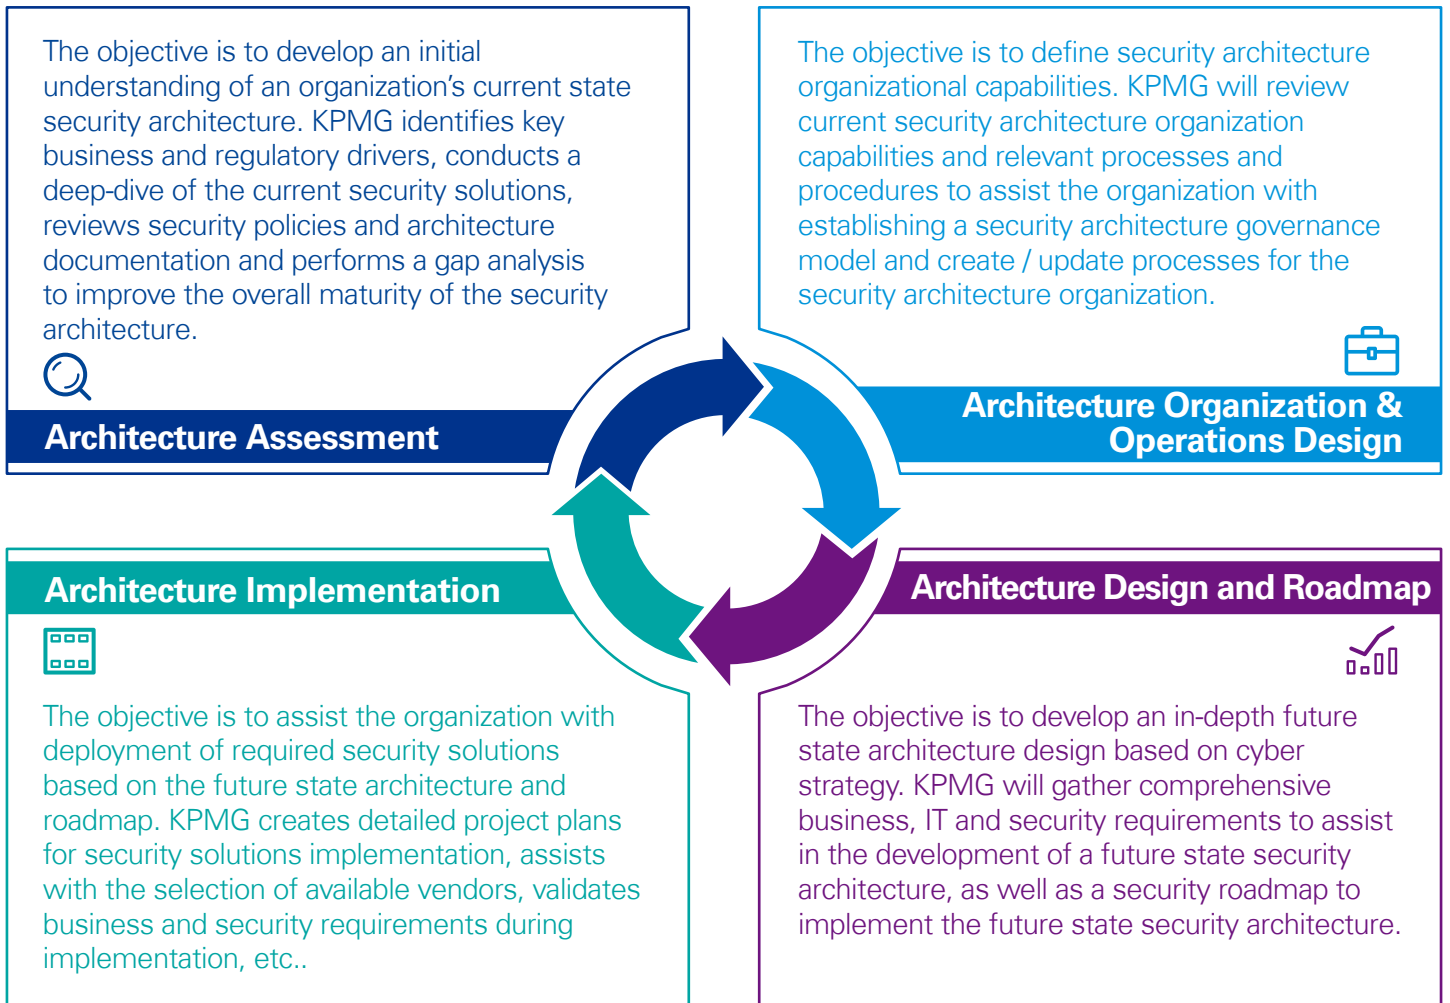

Consistency

Widely adopted frameworks to develop and manage security architecture to ensure the consistency across various industry and clients.

KPMG Security Architecture Design & Implementation service

We approach our architecture designing work with below four focus points. These include assessment of security architecture, establishment of an architecture organization, development of security architecture design and implementation of security architecture and design.
