

Meet AVA.

Our advanced

VAT analysis tool

AVA

Intelligent interactions make intelligent solutions

At KPMG Acor Tax, we have embraced the power of technologies such as artificial intelligence, process automation and data analytics and created Advanced VAT Analysis (AVA). With this solution, you can now go through 100,000 invoices per hour with a 97% accuracy in predicting invoices that are booked wrongly or invoices that could be subject to special clauses or VAT treatments.

With AVA, our ambition is to offer the best-in-class service to our clients by integrating and utilising different technology elements into one product. This way, you will get complete insights into your challenges, while our tax and technology experts will provide you advice on solutions that will keep you aboard the technology train.

How can **AVA** benefit you?

An efficient, accurate and transparent process

Utilising cutting edge technology in financial processes will increase the process and control transparency and accuracy while enabling you to take critical steps towards smart digitisation. With AVA, you will be able to look through all invoices, automatically assess if VAT is booked correctly and identify incorrect postings to reclaim VAT historically.

Transparency in tax compliance

Business process improvement

Potential earnings and savings on unclaimed VAT

Improved efficiency in checking invoices

Collect insights. Be compliant. Stay ahead.

The challenge

Organisations face increased challenges to fully capitalise on artificial intelligence, automation and data analytics. Not only due to the lack of internal resources, but also because many companies experience it as a time-consuming and daunting challenge to go over their full invoice base. For this reason, AVA was born, a solution that integrates these advanced technologies and analyses all your invoices in order to identify what you are looking for.

The opportunity

The new era of digital employees brings new levels of assurance, compliance and insights to business processes and internal controls. AVA can help you identify different process improvements and VAT compliance issues, and at the same time secure VAT reclaims of incorrectly booked invoices by predicting invoices with VAT that have been posted as exempt or 0% VAT.
