

# Covid-19: Return to the office

## Considerations for employers

The information contained herein is of a general nature and is not intended to address the circumstances of any particular individual or entity. Although we endeavour to provide accurate and timely information, there can be no guarantee that such information is accurate as of the date it is received or that it will continue to be accurate in the future. No one should act on such information without appropriate professional advice after a thorough examination of the particular situation.

Reaction

Resilience

Recovery

New Reality

KPMG has a four phase approach to the Covid-19 crisis:

- **Reaction** – we had to close quickly – transition to remote working and implementation of our business continuity plans
- **Resilience** – we have been running our business remotely, sustaining client delivery and ensuring the continuation of our operations
- **Recovery** – the new way of working: returning to the office; home office; face to face meetings; virtual meetings; new technologies; limiting travel; etc.
- **New Reality** – complete shake up of the traditional ways of working

Now we are in the Recovery Phase. We are formalising policies for the New Reality, taking into consideration both the immediate Recovery needs and the long term work environment after a vaccine will become available. Such policies take into account guidance from national governments, WHO and public health bodies.

In this presentation, we are sharing our own experiences. We can help you as an employer navigate through the Recovery Phase and draft relevant internal policies to meet the challenges of the New Reality.

---

## Guiding Principles

- The health, safety & wellbeing of employees is the top priority.
- Your plan should be prepared in consultation with your Human Resources or People team, including representatives from Health & Safety, Legal, and Quality and Risk Management. You may also want to consider engaging a local medical professional or expert in the prevention of communicable disease transmission in the workplace, to review the reasonableness of your plan in light of the threat posed by Covid-19.

---

## Assumptions

- The Covid-19 threat will remain in the environment and represent a significant health threat until a vaccine and/or effective treatments are broadly available.
- We expect national, state and/or local governments (including health authorities) to establish risk levels and provide guidance regarding their requirements and approach to the easing or lifting of restrictions.
- At a minimum, organizations must build their “return” plans to ensure strict adherence with all government requirements and guidance.

---

## Government Actions

We expect national, state and/or local government to establish risk levels so that businesses (as well as the public) can understand the current state of the Covid-19 threat.

We expect governmental guidelines to include when and where to lift restrictions based on the assessed threat level at the time as well as information and guidance on how to ensure the safety and wellbeing of its citizens.

# Do I need to return my workforce to the office?

While there is still a risk to the population from Covid-19 it is important to understand if a return to the office will put the workforce at increased risk of infection.

Organizations must be clear on what they want to achieve by allowing groups of people to return back to the office in the near term and have completed an assessment of business benefits vs. risk.

Organizations may wish to consider a staggered return to work. Before executing plans there are a number of considerations that should be addressed. Those functions that are critical to office operations, those whose roles cannot be fully performed outside the office or those with specific needs linked to working in an office environment returning first:

- Office operations teams / shadow teams
- Risk to mental health of home working
- Unsuitable work space at home
- Access to a specific workstations set up
- Impact of home working on employees ability to learn on the job
- Additional equipment required to be able to fulfil their role
- Roles that cannot operate effectively working remotely
- Roles that cannot be performed in full or part outside the office
- Poor internet connectivity
- Employee dependence on public transport to get to an office location

If consistent with local health authority guidance, consider giving priority access to people who have developed Covid-19 antibodies.

# Returning to the office

If the organization determines that a return to work is beneficial for all employees or specific groups within the workforce it is advised to engage early with building management, brokers and insurers to confirm appropriate risk management mitigations/considerations are in place.

Organizations have a duty to first and foremost protect the health and wellbeing of their people, as well as clients and other visitors to their offices. To ensure that an orderly, efficient process is in place and ready for implementation it is encouraged to start forming return to work plans in advance of indications that national, state or local government may begin easing or lifting restrictions.

Although Covid-19 is a global pandemic - it is unlikely that one global 'panacea' approach to the easing of lockdowns will materialize. The scope of the plan, and the actions required, will differ according to applicable law. It is therefore important that each organization is familiar with the applicable laws, regulations and policies that apply to the health and safety of their people, including visitors to their premises, and the unique threat posed by Covid-19, before implementing measures that attempt to mitigate the risk of people being infected with Covid-19, and contribute to providing a safe and healthy environment in the office.

# The objective is to create plans that will allow

the phased return of personnel to offices and client locations

mitigating the health & safety risks to people, clients and community.

## Gradual and phased return

A return to the office should be gradual and is advised to occur in phases, allowing organizations to test, evaluate and adjust mitigation processes and protocols prior to reopening offices to larger numbers of returning personnel and visitors.

For example, organizations may want to consider a first phase return to include personnel whose functions are critical to office operations or those whose functions cannot be fully performed outside the office. A gradual, phased approach also gives those personnel who have concerns about returning to the office additional time to begin to make the necessary emotional readjustments.

Should governments quickly re-implement restrictions due to a resurgence in the threat (e.g., new community outbreak), the gradual phased approach will allow for the rapid implementation of an appropriate response.

## Mitigating the health and safety risk

Organizations should include in their plans protocols to manage those personnel who may be in a high risk category for exposure to Covid-19.

Referring to respective governmental health authorities as well as those resources noted below to understand high risk criteria as there are varying definitions. There may be potential discrimination risks as a result of the direct or indirect disclosure of this information by personnel to you.

Assessing the impact of working remotely on younger members of the workforce who typically have limited “home office” infrastructure.

Considerations related to office location should be made. Organizations may wish to postpone the return of those employees commuting on public transport whose functions can be fully performed outside the office.

# Four Key Mitigation Measures

The following are four key mitigation measures that organizations should consider implementing once they have determined that a return to the office is necessary for all or party of your workforce.

These are based on guidance from government and private health authorities, including the World Health Organization (WHO), US Centers for Disease Control and Prevention (CDC), EU Center for Disease Control (ECDC), and International SOS (ISOS), the firm's private global medical and security support provider.

The information these organizations provide is based on what is currently known about Covid-19. Governments may issue guidance that differs from that included herein, and organizations may be required to implement those in addition to or instead of these four key measures.

1

Access Controls (Screening) for Personnel, Visitors and Vendors

2

Physical Distancing (also known as social distancing)

3

Personal Protective Equipment (PPE)

4

Office Cleaning and Hygiene

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

The objective is to exclude people from the workplace who may have Covid-19 and cause it to spread to other people. Organizations should consider implementing measures to ensure that personnel, visitors and vendors (e.g., catering and cleaning staff) do not enter the office if they are ill or feeling ill as this could indicate they have Covid-19.

## Consult with building management

If you lease your premises, you should consult with building management to determine what procedures they propose to implement when people return to the office.

## Temperature Checks

Organizations can consider checking the temperature of those entering the office (subject to complying with personal data protection requirements). Fever is one indicator of Covid-19 and anyone who has an elevated temperature should be sent home immediately pending further investigation by a medical professional. They should consider what, if any, documentation they may require people to produce before they are able to return to the office.

## Brief your people

You should consider briefing your people to stay at home if they are experiencing any signs of illness or if they are sharing a household or have been in contact with someone who has been ill with Covid-19 over the past 14 days.

## Self-Affirmation

Provided it is permitted by local law, organizations should consider asking personnel and visitors to affirm that they are not experiencing symptoms of coronavirus (e.g., fever, cough, shortness of breath) verbally, in writing or through technology methods. This will remind people that they need to be vigilant about their own health, and provide personnel with confidence that protocols are in place to maintain heightened awareness. Organizations should consult with their Legal, Risk Management and/or Information Protection Group before implementing any such procedure.

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

## Checklist

- Instruct the employees to stay at home if they have any of the symptoms
- Consult building and office management on returning to the office and agree a timeline
- Work with the building management company and office management on entry procedures to control spread but also a visible indicator of safety
- Develop a visitor policy and process for your premises, where applicable gain an understanding of clients' visitor policies
- Consider a declaration process for staff and visitors to complete prior to or on entering the building (complying with local data privacy rules)
- Establish a database of all staff health, quarantine declaration status, location data and analytics (complying with local data privacy rules)
- Establish response team for confirmed cases
- Dedicate and equip an isolation spaces in the office for people with symptoms in the office and implement evacuation arrangements
- Review all policies, arrangements and communications at least weekly

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

Personnel should remain a distance of 2 meters (6 feet) from others to lower the risk of contamination from an infected person. Organizations should consider the physical distance between personnel around the workstations and how its people move through their offices. This includes lobbies, lifts/elevators, workspaces, conference rooms, food service areas, collaboration spaces, staircases, reception areas and even hallways. Organizations should create limits on the number of people who can frequent a particular location at one time, to include face-to-face meetings, to facilitate this physical distancing measure. Offices may need to close certain areas to reduce the risk of close contact.

Organizations should consider ways to control the number of personnel who can come into the office. This may require having personnel work in the office on alternate days, creating shifts, staggering arrival and departure times, identifying those who can continue to work full-time on a remote basis, and other schemes to reduce the number of personnel in the office so that the firm can safely and easily enable those in the office to satisfy the 2-meter requirement.

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

## Checklist

- Define 'essential workers' those who cannot work remotely for business continuity purposes and identify those workers who need a specialised work station and should not be working from home for a prolonged period.
- Establish approach whereby only a percentage of personnel are present on premise at the same time (with the remaining staff working remotely). Split teams and units into A, B, C teams. Develop a schedule for them to alternate presence in the office. Develop hand-over protocols
- Establish social distancing routines in the office, such as reduced presence in the office, staggered arrival, departure and lunch times, reduced lift usage, access to meeting areas etc.
- Reduce people flow – corridors, staircases, lift lobbies, receptions
- Ensure 2m distant seating and queuing spacing and set-up the office accordingly
- Develop meeting policy (e.g. no meetings with more than 4 attendees)
- Provide safe eating arrangements in the office
- Gatherings – prohibited
- Collaboration spaces, training centres, canteens/staff rooms – closed
- Review all policies, arrangements and communications at least weekly

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

Organizations should consider masks and other face coverings as required PPE for the initial phase of return to work planning. Health authorities have determined that some people may be infected with Covid-19, but may have no symptoms, and thus can unknowingly transmit the virus to others.

Masks and face coverings may reduce the risk of cross-infection. Organizations should determine what types of masks and face coverings are acceptable in their location and engage procurement staff to establish supplies

to support this requirement. In certain countries where there is a shortage of masks government advice may be that, to protect supplies to front-line health workers, the general public should not use medically-approved masks. In such circumstances organizations may choose to follow whatever alternative government guidance is provided or recommend the use of home-made masks until such time as commercial masks are readily available.

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

## Checklist

- Ensure thermometers and personal protective equipment are readily available and guidance on use is displayed in key locations
- Consider wearing masks at work mandatory
- Understand client policy for PPE
- Consider wearing masks during commute or at client locations
- If applicable procurement to identify satisfactory supply of masks for employees and visitors
- If applicable implement guidance for fitting and wearing masks for employees and visitors
- Review all policies, arrangements and communications at least weekly

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

Organizations should consider conducting a “deep clean” of all office spaces prior to reopening the office. Once open, firms should increase the frequency of office cleaning with a focus on “high touch” areas to include lifts/elevators, door handles, tables, light switches, countertops, telephones, desks, keyboards, toilets, faucets, sinks, etc. Ensure that appropriate additional measures are also taken to sanitize any office equipment or IT peripherals that are shared amongst personnel.

## Organizations should:

Ensure that staff, contractors and visitors have access to places where they can wash their hands with soap and water.

Place ample supplies of hand sanitizer throughout the office.

Place cleaning wipes near equipment such as copiers, kitchen appliances, etc.

Place ample supplies of tissues through the office along with “no touch” trash/disposal receptacles.

Arrange for an external vendor to provide a deep cleansing should a case of an infected person in the workplace be identified.

# Four Key Mitigation Measures

1 Access Controls  
(Screening) for Personnel,  
Visitors and Vendors

2 Physical Distancing  
(also known as  
social distancing)

3 Personal Protective  
Equipment (PPE)

4 Office Cleaning and  
Hygiene

## Checklist

- Complete pre-entry deep clean
- Ensure that staff, contractors and visitors have access to places where they can wash their hands with soap and water and make these places visible
- Prepare a cleaning schedule for regular work place disinfection, monitoring, checks and additional measures are also taken to sanitize any IT and office equipment
- Prepare a cleaning schedule for “high touch” areas to include lifts/elevators, door handles, tables, light switches, countertops, telephones, desks, keyboards, toilets, faucets, sinks, etc.
- Ensure wipes are available for employees to clean IT equipment, phones and IT peripherals
- Ensure hand sanitisers are readily available
- Provide tissues and no-touch disposal receptacles
- Establish cleaning response team for confirmed cases
- Review all policies, arrangements and communications at least weekly

# Other considerations

## Business Travel

- Develop a travel policy to address Covid-19 related travel restrictions. Continually update the policy to coincide with evolving government guidance and risk assessments
- Develop generic risk assessments to cover face to face internal and client meetings and site visits.
- Air and train travel can present elevated risk environments. Organizations should defer all travel in the initial return to office and client phase until there is clarity around travel risks and the situation stabilizes.

## Meetings, Events and Conferences

- Establish policy around meetings, conferences and events in view of continued need for social distancing. Governments will play an important role in helping firms to shape this advice and develop effective protocols.
- Organizations should not schedule any external meetings or events in the first 2-4 weeks after people return to the office or host internal meetings with outside visiting personnel. To enable an assessment of initial mitigation steps.
- Once the initial mitigation steps have been assessed as adequate – and meetings and events begin to be held they should be limited in numbers and include implementation of the 2 meter (6 feet) physical distance protocol to reduce the risk of infection. It may help to limit the number of participants in face-to-face meetings, and to continue to prohibit external events and conferences until the coronavirus threat improves.

## Technology

- Prepare the organisation - technically, organisationally and mentally - for a continuation of large-scale remote working
- Arrange for multiple collaboration tools if possible, so employees can choose the best for them and the work they are doing
- Determine how to continue and maintain business essential office operations over the medium to long term
- Deploy a suitable collaboration tool for client interaction
- Implement/continue "always-carry-your-laptop" policy
- Track VPN usage / office access / time sheet data to understand work patterns and compliance with relevant policies

## Infections Among Personnel

- Organizations should have plans in place to respond to and manage cases of personnel infection. Implement a response team that includes Office/Building management, HR, communications, Senior Leadership, risk and legal.

## Communications

Frequent communications are key throughout this time of uncertainty. Organizations should implement an ongoing effective communications strategy. Measures to consider:

- Ensure multiple communication channels are available: email, telephone, video, text etc.
- Weekly organisation-wide communications from leadership
- Weekly senior leadership calls
- Weekly senior leadership and staff meetings
- Poll employees periodically regarding their wellbeing and challenges in working remotely and address concerns
- Encourage employees to communicate with each other and find ways to interact virtually, also outside of business
- Prepare honest and factual communications in relation to cost savings measures affecting personnel and explain the context. Have reactive press statements ready
- Provide very specific personal health and safety instructions for all staff, including links to FAQ. Monitor FAQs regularly and update when required
- Have reactive press statements ready for all kinds of events, including personnel being infected

# New Reality

The impact of Covid-19 led to many workforces shifting to remote working. This shift drives an accelerated roll out and adoption of virtual collaboration tools that could have taken years otherwise.

Organizations recognize that they need to look closely at their digitalization strategies and recognize how essential these are to maintaining a remote workforce, to remain competitive and serve their customers in this new reality.

Considerations for organizations:

- What will the “New Reality” look like once the risk of Covid-19 subsides.
- Will workers be keen to return to the office after they have embraced remote working?
- If productivity levels have not been impacted is the cost of real estate necessary for the organization?
- What is the impact of time saved on the daily commute? Transport delays etc.
- What has been the impact on the workforce and overall business performance without Global Travel?
- Have meetings been as productive when held virtually?
- How can the impact to the organization’s environmental and sustainability goals be sustained?
