The power of transparency

The need for Supply Chain Transparency

Customer expectations are rising, business partners are multiplying and regulations are tightening. Transparency is no longer a 'nice to have'. Supply disruptions, regulatory compliance and the rise of socially conscious buying power require boards of management to acknowledge this brave new era with a need for supply chain transparency.

The power of supply chain transparency differs across industry, raw material, brand and regulatory region. Apply for a quick scan and find out how your company is performing relative to market standards and how a transparency strategy can help to meet the needs of boards of management, operational teams, suppliers and consumers.

Your benefits

KPMG and ChainPoint are happy to share global strategic, execution and technological expertise, fit to your company's position and mission.

I) **Discover where supply chain transparency drives your business case**

II) **Understand your position relative to market peers**

III) **Uncover fact based steps toward executing your transparency strategy**

Examples of powerful outcomes

1. Mapped regulatory risks across a unique supply chain footprint
2. Found complex supply chain cost reduction opportunities
3. Identified supplier collaboration process pains
4. Identified raw materials to prioritize that match consumer demand
5. Overview of the effect on deeper supplier integrations on master data management practices
6. Highlighted regulations with large business impact over the next 5 years
7. Quantified value of transparency data that can enrich predictive models
