Background to this paper

After the financial crisis, companies have been scrutinized as to whether they are paying their ‘fair share’ of taxes. The debate first gained traction in the UK and has now moved to a global debate around transparency and how multi-national businesses are taxed. With the internationalization of businesses, rise of the digital economy and the challenges of the OECD Base Erosion and Profit Shifting (BEPS), companies are preparing for the new environment.

The landscape is changing and providing greater transparency around tax, either to tax authorities around the world and/or to the public is something companies are now preparing for. Given the rapidly changing environment it can be difficult to keep pace with the various proposals and to assess the impact that these will have on your business and to plan how you will comply.

This paper sets out a high level summary of the various legislative proposals and consultations to assist you in assessing how these will affect you. To discuss any of these in more detail please get in touch with the contacts in this report or your local KPMG tax professional.

Content

There are now a number of frameworks both legislative and voluntary, that have been implemented or are being considered for implementation. Initially these focused on the extractives sector, but more recent proposals are expected to impact on all industries and sectors.

The initiatives discussed in this paper cover:

- Action 13 of the OECD’s BEPS (Base Erosion and Profit Shifting) Action Plan regarding country by country reporting and transfer pricing documentation.
- Capital Requirements Directive IV (CRD IV).
- Dodd Frank Act: Section 1504.
- Extractive Industries Transparency Initiative (EITI).

This paper provides a brief introduction, the reporting requirements, current status and some of the issues to be considered. The key requirements of the legislative frameworks are summarized into a table for comparison on page 9. The paper is based on the understanding of key requirements as at July 2014 and should not be taken to be comprehensive. It will be updated periodically as the proposals develop.

Challenges

Country by country reporting was initially focused on a few select sectors, but given the requirements from the OECD, this is now a pressing issue for all multinationals. Companies will need to consider the level of resources and costs involved in gathering the data, the ease of gathering the data and potential system changes and how technology can assist. The requirements for a form of assurance over the process will need to be considered.

Due to the risk of the information being misinterpreted, providing an accompanying narrative and articulating the tax position, will assist in making the information as useful as possible to the reader. The tax transparency debate is constantly evolving and companies should be actively involved in shaping this debate, as well as keeping abreast of proposals and how this may impact them.
OECD Action Plan on BEPS – Action 13

Country by Country Reporting and Transfer Pricing Documentation

Introduction

On 19 July 2013 the OECD released an Action Plan on Base Erosion and Profit Shifting (BEPS). This is a significant development in respect of multilateral initiatives for modifying international tax rules.

The Action Plan covers 15 specific Actions. Action 13 focuses on a company’s global value chain and transfer pricing policy. It aims to introduce consistent documentation and access to information to ensure all relevant tax authorities have access to the same information about a groups’ value chain and the resulting tax consequences.

On 30 January 2014, the OECD published a Discussion Draft on Transfer Pricing Documentation and Country by Country Reporting. Following this discussion draft the OECD welcomed comments from industry and NGO’s. A revised template was issued to delegates in April 2014, and a public consultation was then held in May 2014. The final template was then published on 16 September 2014. The OECD will be consulting to determine the filing and sharing mechanism and is expected to announce this by February 2015.

Status

Action 13 is scheduled to be finalized by September 2014 for domestic implementation from January 2015.

The key dates in relation to Action 13 are:

■ 12-13 November 2013 – Public consultation held.
■ 23 February 2014 – Closing dates for comments on draft.
■ 24 March 2014 – Private consultation meeting.
■ 2 April 2014 – OECD webcast held.
■ 19 May 2014 – Public consultation.
■ June/July 2014 – CFA to review and approve the template
■ September 2014 – Template finalised and published.
■ February 2015 – Announcement of implementation plan.
OECD Action Plan on BEPS – Action 13

Country by Country Reporting and Transfer Pricing Documentation (cont.)

Who’s affected?
The OECD Action Plan on BEPs will apply country by country reporting to all companies located within an OECD or G20 country and potentially wider. This will include all sizes of company, including Small and Medium Enterprises (SMEs). It should be noted that under the current proposals, reporting will only be to the relevant tax authorities and will not be available to the public.

Timing and submission
The implementation process has not been announced but could be as early as 2015. It is proposed that the report will need to be submitted 12 months after the accounting period end of the parent. The mechanism for submission and which tax authorities the template is submitted to is not yet clear. The consultation responses show that businesses wish to submit to the tax authority in the jurisdiction of the parent company however a requirement for local filing is still a possibility although the precise mechanism for this is still to be resolved.

Proposed reporting requirements

CbyC template to include on a tax jurisdiction basis:
- Revenues (split between related party and unrelated party)
- Profit (loss) before income tax
- Income tax paid (including WHT)
- Income tax accrued – current year
- Stated capital
- Accumulated earnings
- Number of employees
- Tangible assets other than cash and cash equivalents

An additional page to the template should list for each tax jurisdiction (i.e. country):
- Constituent entities resident in tax jurisdiction
- Tax jurisdiction of incorporation if different from tax jurisdiction of tax residence
- Business activities for each constituent entity from a pre-defined list of options.
OECD Action Plan on BEPS – Action 13

Country-by-Country Reporting and Transfer Pricing Documentation (cont.)

Some key considerations in relation to the final template

Sources of data
Recognizing groups have different financial systems, accounting policies and approaches to tax management and reporting, the OECD has allowed flexibility in the source of data. Although a consistent approach should be followed year on year it appears changes can be made if the reasons and implications for this are explained. Groups will need to determine the best approach for them and consider the implications of using group versus local GAAP.

Entity versus country level reporting
The template requires data to be disclosed on a country basis, rather than an entity level which was originally proposed. Groups may nevertheless need to gather data entity by entity and then aggregate it to produce the country level data where they do not currently consolidate all entities and all the data points on a country basis.

Scope
Clarity has been provided that ‘any separate business’ is in the scope of the rules including trusts and partnerships. Only entities that are included within the consolidated group for financial reporting purposes should be included unless they have been excluded on the grounds of size or materiality. This may simplify the process of determining how to treat joint ventures and minority interests.

Data Definitions
The OECD has provided guidance on what should be included for each piece of data although this remains broad. For example revenue must include revenues from sales of inventory and properties, services, royalties, interest, premiums and any other income. Groups will need to analyze what is included in their current financial reporting to determine if changes are needed for the CbyC template.

Independent contractors
Independent contractors may be included where they are “participating in the ordinary operating activities of the Constituent Entity”. Groups will need to consider what this means for their business and the most appropriate reporting.

---

OECD Action Plan on BEPS – Action 13

Country-by-Country Reporting and Transfer Pricing Documentation (cont.)

Reconciliation

There is no formal requirement for reconciliation to group financial statements or local filings, however groups should consider whether it is appropriate to do this for internal control purposes, and to be armed with the facts should local administrations raise queries.

Filing mechanism

There has been much debate about the filing mechanism and whether this should be to the parent tax authority and shared under Treaty provisions/Exchange of Information provisions, or submitted locally by the company. This mechanism is expected to be determined between now and February 2015.

Additional requirements of CRD IV and the EU Accounting Directive

Those in the extractive and banking sector will need to consider the country by country reporting requirements specific to their sector, as well as the OECD CbyC template. There should be some synergies in the data requirements, although there may be differences in the definitions of which companies will be included.

Transfer Pricing Documentation

The OECD is proposing a ‘big picture’ approach to documentation. It has outlined a two-tiered structure: a ‘master file’ containing information about the group including its organization structure, description of its business, intangibles, and financial and tax position and a ‘local file’ that is more akin to what we already see in most local TP documentation.

The master file focuses on value drivers of business profit and companies will need to elaborate on the group’s five largest products and/or service offerings.

The text of Chapter V of the Transfer Pricing Guidelines will be deleted and replaced with the newly issued guidance and annexes2.

Groups will need to consider the format and approach for the Master File, and how they leverage existing documentation to produce this. As it is going to each tax authority it is essential it is succinct, clear and consistent with existing public information about the company.

**Capital Requirements Directive IV**

**Introduction**

The Capital Requirements Directive IV (CRD IV) brings in transparency rules for EU institutions. CRD IV has introduced a requirement for institutions to disclose, on a country by country basis, information on; activities, turnover, employees, profits and corporate taxes.

**Status**

The first report was required on 1 July 2014 and required public reporting of name, nature of activities, geographical location, turnover and number of employees and in scope entities.

The next report due for all groups, by December 2015, will require disclosure of the following additional items; profit or loss before tax, tax on profit or loss and public subsidies received.

The rules came into law in the UK with effect from 1 January 2014, however many EU Member States have yet to issue, or are in progress of implementing the directive into domestic legislation.

**Key challenges**

**Differing country implementation**

KPMG professionals have already seen that countries have interpreted legislation in different ways to the UK, as such groups will need to consider how they achieve a consistent disclosure for each country.

**Recognizing wider contribution**

The disclosure requirements for tax are limited to corporate income tax only, which is only one part of a company’s total tax contribution. The legislation allows for disclosure of more information than required, and so groups should consider their overall strategy and whether they want to pro-actively demonstrate their wider contribution to governments and society.

**Alignment with OECD CbyC requirements**

The CRD IV reporting requirements are similar to the OECD proposals, but only apply to regulated entities, so institutions need to ensure data is consistent in each report, and that they create an efficient single compliance process to manage both obligations.
**Capital Requirements Directive IV (cont.)**

</tbody>
</table>
Introduction
In July 2013 a Directive on the annual financial statements, consolidated financial statements and related reports of certain types of undertakings was approved by the European Parliament. This piece of legislation follows on from the Dodd Frank Act Section 1504 legislation in the US, and requires large undertakings and all public-interest entities active in the extractive industry or the logging of primary forests, to prepare and make public a report on payments made to governments on an annual basis.

Status
Member states have until July 2015 to issue laws to enforce its application and reporting must begin for financial years commencing on or after 1 January 2016 at the latest. France, Germany, Italy and the UK have committed to a fast track implementation in advance of this date.

Key challenges
Defining the undefined
Companies will need to define ‘projects’ and what constitutes a ‘tax on income’ in each country that they operate in, as the legislation leaves room for interpretation.

Scope of entities covered
Multinational groups will need to identify which entities will be required to be disclosed based on the activities they undertake, and also how to deal with joint arrangements.

Equivalence criteria
Companies will need to assess whether public reports to be made under other reporting meet the equivalence criteria, and are hence exempted. Given Dodd Frank Section 1504 is still not finalized, this is unclear.

Who does it affect?
Large companies and public interest entities in the EU, with an activity involving exploration, prospection, development and extraction of minerals or oil and gas, or the logging of primary forests.

What does it require?
The disclosure of all payments to governments in individual and consolidated reports. The reports are part of a company’s annual financial reporting obligations and shall be published as laid down by the laws of each Member State. Where the parent of a subsidiary is located in a Member State, and that subsidiaries payment is included in a consolidated report by the parent, the subsidiary is relieved from its reporting obligations.

Dodd Frank Act: Section 1504

Introduction
The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) was signed into law by President Obama on 21 July 2010 and primarily focuses on financial regulatory reform.

Section 1504 of the Act concerns the reporting of financial payments to governments and government agencies made for the purpose of developing oil, gas and mineral reserves. It is part of a global movement to enhance the public scrutiny of the relationship between extractive industries and host governments.

Status
On 2 July, a U.S. District Court determined Section 1504 was, in part, ‘arbitrary and capricious’ and vacated the rule. The SEC has decided not to appeal the U.S. District Court decision, but is redrafting the legislation. On 28 April 2014, 34 institutional investors sent a letter to SEC Chair Mary Jo White supporting the resource extraction rules, and stating that they “remain confident that the Commission will see the process through to a conclusion that fulfils its mission”. Despite there being no definitive timelines in place we are expecting further discussions during 2014 and 2015.

Key challenges

Infrastructure improvements
Identifying and valuing infrastructure improvements, including complexities around transfers, work in progress and shared use of assets.

Government bodies
Defining and identifying the multitude of local government bodies, including agencies, government controlled entities and state and municipal level governments.

Joint arrangements
Where companies engage in joint ventures or contractual arrangements, they must use a ‘facts and circumstances’ approach to determine whether they have control. This should in turn ascertain if they need to disclose the payments in relation to that arrangement.
## Dodd Frank Act: Section 1504 (cont.)

<table>
<thead>
<tr>
<th>Who does it affect?</th>
<th>What does it require?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any company that is engaged in the commercial development of oil, natural gas, or minerals, and is required to file annual reports with the Securities and Exchange Commission (SEC) i.e. 10K, 20-F, 40-F. This includes a subsidiary of that company, or an entity under the control of the company.</td>
<td>Affected companies are required to submit annually their global payments to governments covering: The type and total amount of such payments made for each project of the resource extraction issuer relating to the commercial development of oil, natural gas or minerals. The type and total amount of such payments made to each government.</td>
</tr>
</tbody>
</table>

### Proposed reporting requirements

#### Disclosure requirements
An annual report must be filed on Form SD with the SEC, in XBRL format using specified electronic tagging as defined by the SEC. The de minimis reporting requirement is $100,000 for one payment or a series of payments. The total payments to each government. The total amount of payments made per project and business segment. There is no audit requirement, but the filing is subject to Exchange Act Section 18 liability.

#### Payments to be disclosed
- Taxes levied on income, production or profits.
- Royalties.
- Fees such as; license, rental, and entry.
- Production entitlements.
- Bonuses such as; signature, discovery, and production.
- Dividends.
- Payments for infrastructure improvements.
- Payments in kind must be reported at cost, or if not possible, at fair market value.
**Extractive Industries Transparency Initiative (EITI)**

**Introduction**

The Extractive Industries Transparency Initiative (EITI) is widely viewed as the driver for global transparency in the extractives industry. It is an international standard with a flexible methodology that is voluntarily entered into by governments in order to reconcile payments between the parties in developing nations. It is developed and overseen by a coalition of governments, companies, civil society, investors and international organizations.

**Status**

**Compliant and candidate countries**

31 countries are now EITI compliant, which means they are meeting all the requirements. 16 countries have achieved EITI candidate status, which means they are currently in the process of implementing. 

**Company progress**

Approximately 80 of the world’s largest oil, gas and mining companies support and actively participate in the EITI process in some form.

---

**Who does it affect?**

Governments and extractives industry companies involved in exploration and production of oil, natural gas or minerals. EITI is signed up to voluntarily by countries, but once they sign up it requires that all companies and all government agencies making or receiving material payments participate.

**What does it require?**

The framework provides guidance on the disclosure requirements, but it is for the implementing country to define the exact framework.

Companies must report to the government running the EITI country program using the relevant template.

Country governments produce the report.

Reports are analyzed and reconciled by a third party, and then published.

---

**Reporting requirements**

**Disclosure requirements**

- Companies disclose all material payments to government.
- Governments disclose extractive industry revenues.
- Materiality levels are set by the country multi-stakeholder group.
- Contextual information on the industry and country must be provided in the report.
- EITI compliant countries must make the reports publically available.

---

**Payments to be disclosed**

- Profit taxes.
- The host government’s production entitlement.
- Royalties.
- Dividends.
- Bonuses such as; signature, discovery and production.
- License fees, rental fees, entry.
- Any other significant payments and material benefits to government.

<td>CRD IV applies country by country reporting to 'institutions' in the EU. Institutions are defined as credit institutions and investment firms.</td>
<td>Public-interest and non-public large companies incorporated in the EU, active in exploration, prospection, development and extraction of minerals or oil and gas, or logging of primary forests.</td>
<td>SEC registered companies engaged in the commercial development of oil, natural gas, or minerals.</td>
<td></td>
</tr>
</tbody>
</table>

### When does it come into effect

- The final template was published by the OECD is September 2014. The implementation plan will be announced in February 2015, and the requirements could be in effect by 2015.
- Names and activities, turnover and number of employees were reported on 1 July 2014. Full reporting is due by 31 December 2015.
- Member states have until July 2015 to implement. Reporting begins for financial years commencing on or after 1 January 2016 at the latest.
- The SEC are redrafting the legislation and no definitive timelines have been set out at this stage. Developments are expected in 2015.

### Threshold

- No threshold
- No threshold
- Payments exceeding EUR 100,000
- Payments exceeding USD 100,000

### Data aggregation

- By country
- By country
