

KPMG IMPACT

KPMG's dedicated
sustainability team

An aerial photograph of a river winding through a lush, green forest. The water is dark and reflects the surrounding trees. The forest is dense with various shades of green, indicating a healthy ecosystem. The river flows from the top right towards the bottom left of the frame.

Navigating climate change and sustainability

KPMG IMPACT is a dedicated cross-functional team of experts who help corporate and public sector clients plan and execute programmes addressing Environmental, Social and Governance (ESG) topics, decarbonisation and long-term value creation.

The team brings together a wide range of disciplines including sustainability practitioners, economists, engineers, corporate strategists, accountants and financiers to help clients navigate the complex and fast-evolving climate change and sustainability agenda.

At KPMG in Singapore, we believe that organisations that rise to these challenges and show leadership will be rewarded by their stakeholders and gain access to new opportunities. Those businesses that fail to act may put their margins and even business models at risk.

Whether your organisation is just beginning its sustainability journey, reporting on its progress or financing new initiatives, we have the knowledge and the people to support you.

Sustainability Services

01

ESG and Sustainability

02

Sustainable Finance

A long-term perspective in business and strategy is more important than ever.

Our experts will help you identify, develop, embed and report on your sustainability strategy to create and protect long-term value:

How can KPMG help?

- Understand and challenge your overall financial and sustainability ambitions
- Identify material issues, risks and opportunities – including climate risk mapping and supply chain assessments
- Communicate your sustainability vision and strategy, both internally and externally

Sustainability strategy

- Sustainable growth strategy – if social pressures and your revenue objectives complement each other. Incorporating circular economy principles and best-in-class practices for your sector into your strategy and framework
- Defensive strategy – when your company is finding it difficult to monetise the disruption but doing nothing would jeopardise future revenue

Planning and implementation

- We review and design your governance structures, KPIs, targets, policies, processes and reporting framework for sustainability
- We plan and implement the strategy through change management programmes that ensure organisational alignment and incentives, and address skills gaps

Capacity Building

- Enabling your people to drive sustainability performance through bespoke capacity building support
- Briefings to leadership on emerging sustainability considerations for your organisation

Taking account of ESG considerations when making investment decisions.

Our knowledge covers the full spectrum of sustainable finance, from responsible investing and allocation of capital through to fundraising and M&A activities.

How KPMG can help you?

Financial Services (Asset Managers, Banks and Insurers):

- ESG investment strategy development
- Climate risk strategy and reporting
- Prudential climate risk services – stress testing and conduct frameworks

Deal advisory:

- Develop and implement your M&A strategy and review proposed investments from a sustainability perspective
- Assess green options for your investments or fund raising such as green bonds and sustainability-linked loans
- ESG due diligence and valuations

Climate change and
Decarbonisation

04

IMPACT Measurement, Reporting
& Assurance

Reducing carbon emissions from your organisation and supply chain.

Governments and other stakeholders are pushing businesses and public bodies to reduce their emissions through regulatory changes, investment decisions and purchasing choices. Organisations are additionally asked about their exposure to climate change and what measures they are taking to safeguard their business.

How KPMG can help you

Climate Change Risk

- Assess your exposure to climate change risks and opportunities
- Analyse the plausible climate change scenarios that your organisation may face and stress test climate change exposure
- Measure the operational and financial implications of climate change
- Investigate the integration of climate change considerations into business activities such as risk management processes and operational procedures

Decarbonisation

- Measure your greenhouse gas (GHG) emissions and understand the most carbon-intensive activities in your value chain
- Assess the impact of the move towards a low-carbon society on your current operations, quantifying the costs and risks of business as usual
- Understand the opportunities that might arise from an accelerated transition to net zero
- Formulate a strategy to reduce and ultimately remove GHG emissions from your value chain

Improving the clarity of your external reporting and securing assurance over its accuracy.

Your organisation is expected to measure its sustainability performance and be transparent about this with your customers, NGOs, investors and other stakeholders.

Today, that means covering more and more environmental, social and governance indicators in your corporate reporting and making sure that these disclosures are reliable and in accordance with international guidelines (GRI, IIRC, CDP).

How KPMG can help you

- Regulatory disclosures including the Singapore Exchange (SGX) sustainability reporting requirement
- Internal audit and readiness reviews
- External assurance to the standard of ISAE 3000
- Green/sustainable bond and loan assurance against ICMA's Green Bond Principles, ASEAN Bond standards and the Climate Bonds Initiative
- Indices and standards reporting, including GRI, DJSI, CDP, IIRC, UNPRI and UNSDGs
- Climate risk reporting, including the Monetary Authority of Singapore (MAS) Environmental Risk Guidelines and TCFD
- Independent GHG verification, including the National Environment Agency (NEA) Carbon Tax
- Impact measurement and valuations (KPMG True Value)
