Introduction

Omnichannel is one of the biggest management buzzwords of the digital age. But while multiple cross-channel interactions are important for customer engagement, they alone are not enough for companies to compete in today’s environment. Especially when profitability is at stake.

At a time when poor customer experience can go viral in a matter of minutes, companies can live or die by the way they deliver services, respond to issues and manage customer expectations. Indeed, CEOs themselves feel a growing responsibility to represent the best interests of their customers, according to KPMG International’s 2017 CEO Outlook Survey.

I believe the key to growth lies in the ability to design and deliver compelling, seamless customer experiences, which require alignment across the front, middle and back office. They need to be connected with five stakeholder groups: customers, business functions, employees, partners, and the digital ecosystem.

Many CEOs concur. Fifty-five percent said they have aligned their middle- and back-office processes to support a more customer-centric approach to front-office operations. Their goal is simple: to deliver profitable customer experiences.

This report focuses on the value of being a customer-centric organization and the steps to achieve it. With insight from our 2017 CEO survey and KPMG-commissioned Forrester research of more than 1,200 organizations, we address how to look beyond omnichannel interactions to build a connected enterprise. Such an enterprise can help you navigate the challenges of digital disruption, compete effectively in a rapidly evolving marketplace and drive profitable growth.

Julio Hernandez
Lead Partner of the KPMG Global Customer Center of Excellence and Customer Advisory Lead for KPMG in the US
View from the top

CEOs understand that customer-centricity leads to growth. This is beginning to filter into their organizations.

View from CEOs*

- **Representing the interests of customers**
  - 70% of CEOs feel a growing responsibility to represent the best interests of their customers.

- **Building trust with customers**
  - 61% of CEOs agree that building greater trust with customers is among their top three priorities.

- **Depth of customer insight**
  - 56% of CEOs are concerned about the data they are basing decisions on and 45 percent say the depth of customer insight is hindered by lack of quality data.

- **Aligning the organization**
  - 55% of CEOs have aligned their middle- and back-office processes to reflect a more customer-centric approach to their front-office operations.

**Commissioned study conducted by Forrester Consulting on behalf of KPMG International, July 2016, of 1,290 global professionals involved with omni strategy decisions at their companies.

View from technology and omni business leaders**

- **Investing in core customer capabilities**
  - 77% of organizations say omni is a priority for their organization.

- **Generating growth**
  - 50% of organizations say the primary objective of their omni strategy is to achieve growth.

- **Return on investment**
  - <1/3 of organizations are getting a strong or acceptable return on their investment in omni.

“When transformation is driven from the top down we regularly see better business results. CEOs need to help their organizations break down the internal silos so that they can get things done on behalf of the customer and achieve growth.”

— Julio Hernandez
KPMG in the US
How can you stay ahead of rising customer expectations?
This new environment has created a fiercely competitive marketplace where brands must transform rapidly to meet evolving customer expectations. Disruption has become pervasive; challenging business models, legacy products and entire industries. Even the most highly regulated markets and companies are no longer immune.

Therefore, delivering on the customer imperative for a connected experience requires organizations to be responsive, resilient and closer to their customers than ever before. The ability to understand and meet customer expectations is a primary driver of growth, as confirmed by our research. To survive and thrive, organizations must continually understand and manage the expectations of their customers — as well as the partners who engage those end customers — and create differentiated experiences that go beyond multichannel interactions. These expectations span four key experience attributes:

1. **Brands** must be perceived as trustworthy, attractive and differentiated from their competition.
2. **Products and services** must be relevant, transparent and consistent.
3. **Customers’ interactions with a company** must be personal, seamless, frictionless and timely.
4. **A company’s people** must be truly customer-centric: knowledgeable, reliable and empowered.

“Disruption has become pervasive, challenging business models, legacy products and entire industries. Even the most highly regulated markets and companies are no longer immune.”

Businesses must put the customer at the center and elevate customer experience as a competitive differentiator. However, the ability to consistently align the experience expectations with experience delivery has proven a critical and enduring challenge, according to our research.

This struggle is largely because too many organizations are focused on solving their front-office issues without aligning their middle and back offices to execute and deliver on their customer promise. They’re facing obstacles like customer data that’s buried in different business units, products and pricing that vary across channels, and supply chains that can’t meet the commitments made to customers.

---

**Customer centricity drives sales growth**

According to a 2016 study from KPMG Nunwood, companies that are more customer-centric have higher sales growth than companies that are not customer-centric.

Becoming a connected enterprise
High-performing organizations recognize that to become truly customer-centric — and deliver experiences that create value for both the customer and the company — they need to get connected. That means connecting to their customers with compelling value propositions, opportunities and interactions. It also means connecting their front, middle and back offices to execute the customer growth agenda effectively and efficiently while also connecting and aligning with their channel and business partners to jointly deliver on commitments to customers. Lastly, it means staying connected to market dynamics and digital signals.

KPMG refers to this level of maturity as the connected enterprise and it goes far beyond channel harmonization. According to our research, high-performing organizations are getting connected by making significant investments across eight connected enterprise capabilities. They are doing this to a greater degree than less mature organizations. These connected enterprises are able to understand what customers need and value, and they achieve it by delivering the intended experience profitably. They also have the responsiveness and resiliency to evolve with the changing consumer and competitive landscape to consistently deliver on their customer promise.

Capturing the value opportunity in a connected enterprise
Our research shows that it pays to be connected. Compared with less mature organizations, companies that invest across the eight capabilities are meeting customer expectations.

**Delivering against expectations**
(‘Exceeds expectations’ shown.*)

Moreover, compared with less mature organizations, companies that invest across the eight capabilities are significantly more likely to meet their business objectives.

**Please rate your company on its ability to execute on the following objectives.**
(‘Excellent’ or ‘good’ shown.*)

*Base: 314 global professionals at companies investing in all eight omnichannel capabilities and 976 not investing in all eight capabilities. Source: A study conducted by Forrester Consulting on behalf of KPMG, July 2016.*
Mature organizations also are more likely to see an acceptable return on their investment in customer initiatives.

- Increase in revenue: 47% for mature organizations, 35% for others
- Customer satisfaction (net promoter score, reduced complaints, customer feedback): 46% for mature organizations, 21% for others
- Cost reduction: 45% for mature organizations, 21% for others
- Customer retention: 43% for mature organizations, 19% for others
- Average order value per customer: 42% for mature organizations, 22% for others
- Customer transition between channels: 40% for mature organizations, 22% for others
- Increase in market share: 39% for mature organizations, 15% for others
- New customer acquisition: 37% for mature organizations, 21% for others
- Customer lifetime value (CLV): 36% for mature organizations, 13% for others
- Profit per order: 35% for mature organizations, 14% for others
- Operating margin: 35% for mature organizations, 20% for others
- Share of wallet/profit per customer*: 35% for mature organizations, 20% for others

*Base: Variable; global professionals at companies with mature omnichannel strategies and those at less-mature companies that are measuring ROI on their omnichannel investment.

Source: A study conducted by Forrester consulting on behalf of KPMG, July 2016.

Fifty-one percent of mature organizations are using 5+ metrics to measure ROI versus 42 percent of less mature organizations.

“Investing in the eight capabilities is only part of the equation. Brands also must have a clear understanding of where and how they’re investing so they can fully benefit from the connected enterprise approach. Only then will they be able to deliver what consumers want.”

— Duncan Avis
Global Connected Enterprise Architect,
KPMG in the US
Omnichannel success metric

Customers’ experiences exceed expectations
AND
Successful execution on one or more omnichannel business objectives
AND
ROI achieved on one or more metric(s)

When you consider all of these omnichannel success factors — meeting customer expectations, meeting business objectives and achieving ROI — mature firms, or what we call connected enterprises, are roughly twice as likely to achieve omnichannel success when compared with organizations that do not invest in the eight capabilities.

Connected enterprises also enjoy:

— **Better customer retention**, with 89 percent of customers retained, compared to 33 percent for companies with weak omni strategies.²

— **Lower annual per-customer contact costs**, with a 7.5 percent year-on-year decrease compared to 0.2 percent for laggards.³

— **Higher annual revenues**, with a 9.5 percent year-on-year increase versus an average 3.4 percent.⁴

— **Greater customer lifetime value**, as customers who purchase through both physical and online locations have a 30 percent higher lifetime value than those who use only one channel.⁵

Ultimately when it comes to capturing value, the work KPMG member firms do with clients shows that the connected enterprise enables organizations to better manage and modify expectations and deliver the right experience — at the optimum value. That is, mature organizations are more successful at striking the right balance between what customers expect and what makes financial sense. They do it by mastering the economics of customer experience. Simply stated, enterprises need to manage both experience expectations and experience delivery and execution, recognizing the power of the eight connected enterprise capabilities working together.

Economic value is lost when experience fails to meet expectations, resulting in lost revenue and share.

Economic value is maximized when customer expectations and experience are in alignment.

Economic value is lost when experience significantly exceeds expectations, resulting in higher than necessary operating costs.
“Creating a connected enterprise is not just about the front office — it is across the entire enterprise value chain. While we know that addressing this is a top priority, many organizations have not yet set or executed on their omni strategies. There is tremendous financial impact to getting this right — gains in revenue, efficiency, retention and customer lifetime value.”

— **Julio Hernandez**
Lead Partner of the KPMG Global Customer Center of Excellence and Customer Advisory Lead for KPMG in the US
Charting the way forward
Despite this compelling evidence, our research shows that just 24 percent of organizations are investing in all eight capabilities of a connected enterprise.

How can you get into action? Keep in mind that becoming a connected enterprise is an ongoing journey — not an end state. Here are some key steps for developing your strategy:

1. **Understand how you are performing today.** Consider several dimensions: What are your customers telling you about the services and products you are delivering to them — are they promoters, satisfied, profitable? If not, where is the breakdown occurring? How is your organization performing on each of the eight capabilities of a connected enterprise? To what extent is the business ensuring the eight capabilities are working together to provide a seamless experience for the customer?

2. **Define the customer experience your business wants to deliver** based on a clear understanding of the voice of the customer, the marketplace including competitive and comparative practices and experiences, and the economics of these experiences on your existing and target customers.

3. **Identify the necessary requirements for delivering the appropriate customer experience** using the eight capabilities of a connected enterprise and understand where there are gaps in your company’s ability to execute today.

4. **Develop a road map for closing the connected enterprise gaps.** Create a detailed business case for each initiative, with clear linkages to desired value and required capabilities.

5. **Execute the plan and continually monitor your progress** from your customers’ perspective, the economics of the experiences delivered and your competitive positioning.

Today’s customers are better informed, better connected and more demanding than ever before. Customer experience is overtaking price and product as the number-one brand differentiator. Organizations are investing record amounts on customer-related initiatives, but not all are seeing a credible return on investment.

KPMG member firms combine expertise in strategy and implementation — as well as industry and functional knowledge — to create better customer outcomes that produce better business returns. That means looking beyond the front office to a wholesale transformation of functions such as marketing, sales and service — and linking them to the middle and back office. The resulting organization is closer to customers and can deliver interactions that are seamless, responsive, relevant and consistent, helping companies build greater loyalty and share of wallet. From ambition to implementation, KPMG member firms work alongside organizations on their journey to become customer-centric, balance cost against customer satisfaction and maximize opportunities to increase revenue.
